

SOUTHEAST GAP ANALYSIS PROJECT

Species Modeling Report

Northern Flicker

Colaptes auratus

Taxa: Avian

Order: Piciformes

Family: Picidae

SE-GAP Spp Code: **bNOFL**

ITIS Species Code: 178154

NatureServe Element Code: ABNYF10020

KNOWN RANGE:

PREDICTED HABITAT:

Range Map Link: http://www.basic.ncsu.edu/segap/datazip/maps/SE_Range_bNOFL.pdf

Predicted Habitat Map Link: http://www.basic.ncsu.edu/segap/datazip/maps/SE_Dist_bNOFL.pdf

GAP Status 1: An area having permanent protection from conversion of natural land cover and a mandated management plan in operation to maintain a natural state within which disturbance events (of natural type, frequency, and intensity) are allowed to proceed without interference or are mimicked through management.

GAP Status 2: An area having permanent protection from conversion of natural land cover and a mandated management plan in operation to maintain a primarily natural state, but which may receive use or management practices that degrade the quality of existing natural communities.

GAP Status 3: An area having permanent protection from conversion of natural land cover for the majority of the area, but subject to extractive uses of either a broad, low-intensity type or localized intense type. It also confers protection to federally listed endangered and threatened species throughout the area.

GAP Status 4: Lack of irrevocable easement or mandate to prevent conversion of natural habitat types to anthropogenic habitat types. Allows for intensive use throughout the tract. Also includes those tracts for which the existence of such restrictions or sufficient information to establish a higher status is unknown.

PREDICTED HABITAT MODEL(S):

Year-round Model:

Habitat Description: Northern Flickers area most common in open woodland and forested areas (riparian, mixed pine-hardwood and parks) with open ground (AOU 1983, Ehrlich 1988). Found in open woods and forest edges, residential and suburban areas (Robertson and Kushlan 1984). Inhabit all forest types but appear to prefer hardwoods for breeding. Use burned areas and clearcuts (Moore 1995). They generally avoid dense canopy interior forest (Kaufman 1996). They feed on ground and glean tree bark for invertebrates (Ehrlich et al. 1988).

Excavates or uses old cavity 6 to 100 feet above ground (Ehrlich et al. 1988) in dead wood, stump and dead tree tops. Sometimes nests in wooden poles, buildings or earthen banks (Harrison 1978).

Uses more fragmented and open woods with bare ground, woodland margins and groves. Seldom in extensive forests (Hammel 1992)

Quoted directly from existing state habitat notes - K. Cook, 9Feb05

Additional information:

Elchuck and Wiebe (2003) found that Flickers flew up to 1300m from the nest in woods to forage in open areas. K. Cook, 9Feb05

Elevation Mask: < 1219m

Mask of Forest Interior Avoidance: Exclude forest interiors with 500m buffer into them.

Selected Map Units:

Functional Group	Map Unit Name
Anthropogenic	Deciduous Plantations
Anthropogenic	Developed Open Space
Anthropogenic	Evergreen Plantations
Anthropogenic	Low Intensity Developed
Anthropogenic	Pasture/Hay
