GAP Status 1: An area having permanent protection from conversion of natural land cover and a mandated management plan in operation to maintain a natural state within which disturbance events (of natural type, frequency, and intensity) are allowed to proceed without interference or are mimicked through management.

GAP Status 2: An area having permanent protection from conversion of natural land cover and a mandated management plan in operation to maintain a primarily natural state, but which may receive use or management practices that degrade the quality of existing natural communities.

GAP Status 3: An area having permanent protection from conversion of natural land cover for the majority of the area, but subject to extractive uses of either a broad, low-intensity type or localized intense type. It also confers protection to federally listed endangered and threatened species throughout the area.

GAP Status 4: Lack of irrevocable easement or mandate to prevent conversion of natural habitat types to anthropogenic habitat types. Allows for intensive use throughout the tract. Also includes those tracts for which the existence of such restrictions or sufficient information to establish a higher status is unknown.

PREDICTED HABITAT MODEL(S):

Year-round Model:

Habitat Description: The bobcat uses a wide variety of natural habitats, especially mixed woodland habitats, and it is also able to change its way of life as civilization modifies the environment. Often found adjacent to agricultural areas as long as rocky ledges, swamps, or forested tracts are present. Resting and activity areas most often center around rocky ledges and conifer swamps in the north, bogs and swamps or brier or palmetto thickets in the south (Whitaker and Hamilton 1998).

Avoidance Mask: Medium - moderately intolerant of human disturbance.

Contiguous Patch Minimum Size (hectares): 300
