Species Modeling Report

Rim Rock Crowned Snake

Tantilla oolitica

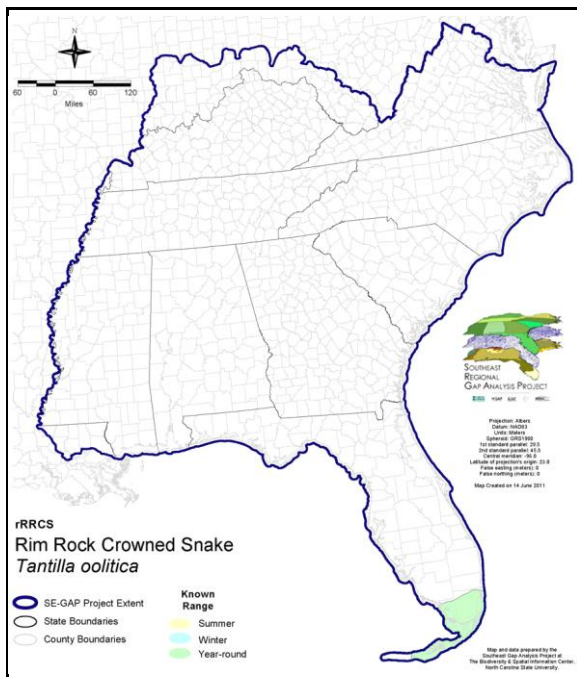

Taxa: Reptilian
 Order: Squamata
 Family: Colubridae

SE-GAP Spp Code: **rRRCS**

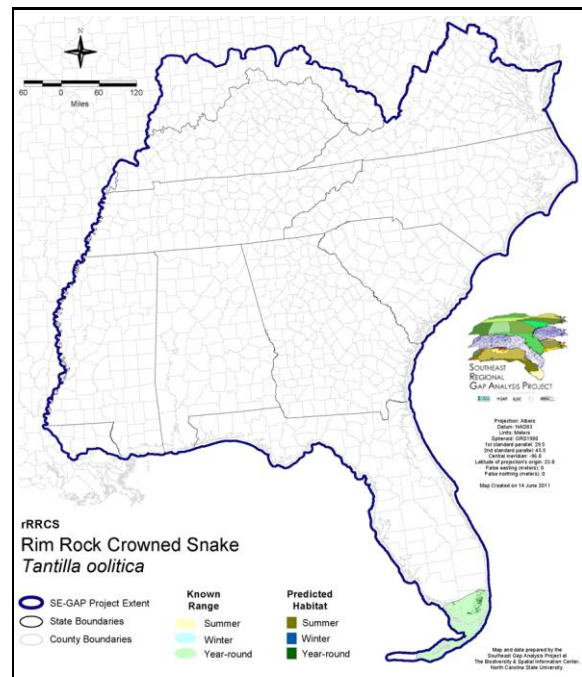

ITIS Species Code: 174284

NatureServe Element Code: ARADB35060

GAP Status 1: An area having permanent protection from conversion of natural land cover and a mandated management plan in operation to maintain a natural state within which disturbance events (of natural type, frequency, and intensity) are allowed to proceed without interference or are mimicked through management.

GAP Status 2: An area having permanent protection from conversion of natural land cover and a mandated management plan in operation to maintain a primarily natural state, but which may receive use or management practices that degrade the quality of existing natural communities.

GAP Status 3: An area having permanent protection from conversion of natural land cover for the majority of the area, but subject to extractive uses of either a broad, low-intensity type or localized intense type. It also confers protection to federally listed endangered and threatened species throughout the area.

GAP Status 4: Lack of irrevocable easement or mandate to prevent conversion of natural habitat types to anthropogenic habitat types. Allows for intensive use throughout the tract. Also includes those tracts for which the existence of such restrictions or sufficient information to establish a higher status is unknown.

PREDICTED HABITAT MODEL(S):

Year-round Model:

Habitat Description: A rare snake of Florida the rim rock crowned snake can be found in sandy or rocky soils is slash pine flatwoods, tropical hammocks, vacant lots and pastures with shrubby growth (Campbell in Moler 1992 in FL-GAP 2003). 25Aug05 Amy Silvano

Ecosystem Classifiers: Bare sand, low urban, pasture, flatwoods, domes/hammock. Amy Silvano 25Aug05

Selected Map Units:
